## Customer information on optional ordering of devices without cable gland

Dear business partner,

As you know, some of our devices are supplied with pre-assembled cable glands, others are supplied with the cable glands in separate packaging.

We have noticed that some of the cable glands on our devices are being replaced by your own solutions and that the glands included in the delivery program are removed beforehand. We have been informed of the wish to no longer receive the cable glands as an option.

We consistently pursue the requirements of our customers.  
Your opinion is very important to us.

As an intergenerational, family-run company, we are committed to the Sustainable Development Goals (SDGs) of the United Nations (UN).

Among other things, we can make a particularly large contribution to the goal of "sustainable consumption and production".

Consequently, we are currently planning to remove the cable glands of our MT-ST thermometer series **MESSKO® TRASY2** and **MESSKO® COMPACT** as well as our **MESSKO® MTO** oil level indicators from our scope of delivery *as an option*. If you continue to use your usual material number, everything will remain the same for you..

From **August 1, 2024**, you will therefore have the option of ordering devices from the **MESSKO® TRASY2** and **MESSKO® COMPACT** thermometer series and the **MESSKO® MTO** oil level indicator with a new option "without cable gland" (offshore variants excluded).

This allows you a quick and flexible connection. In addition to the plastic blanking plugs, the metal screw plugs will continue to be available as an option. As usual, you will find more detailed information in the operating instructions.

Do you have any questions? Get in touch with us.
