Discontinuation of on-load tap-changer type OILTAP® M Addendum to the variants MS and MSE

Dear Customer,

more than 30 years ago, we successfully launched the vacuum technology for on-load tap-changers to the market and consistently implemented it for all tap-changer types with oil technology. Since the introduction of the VACUTAP® VM® on-load tap-changer, we can offer high-quality vacuum technology alternatives for the entire OILTAP® standard portfolio. Their unique advantages - highest performance, reliability and lowest maintenance costs - have convinced the majority of our customers worldwide. Accordingly, the sales of the OILTAP® on-load tap-changer family continued to decline.

In April 2020 we informed you about the discontinuation of the on-load tap-changer family OILTAP® M. On current occasion, we would like to inform you that this discontinuation affects the following variants of the OILTAP® M:

OILTAP® M, MS, MSE

OILTAP® MS

OILTAP® MSE

All dates and general conditions mentioned in the letter of discontinuation refer to these variants. Of course, we will continue to offer you a solution for every application in the future and will provide you with spare parts, repair services and competent technical support for these products as part of our worldwide after-sales service.

Please also forward this information to other relevant departments within your company. We thank you for your trust in us and our products and are looking forward to our further cooperation. For any questions related to this discontinuation, please feel free to contact our sales team at any time.
