Discontinuation of on-load tap-changer type OILTAP® RM

Dear customer,

Since the introduction of the VACUTAP® VR® on-load tap-changer in 2004, we have offered the ideal alternative to classic oil technology. In the meantime, the next generation is in operation, which has proven itself over several thousand times setting new standards in reliability in addition to maximum safety and economy. The majority of our customers worldwide rely on the unique advantages of the vacuum technology. Accordingly, the sales of OILTAP® RM continued to decline.

For this reason, we will remove the OILTAP® RM on-load tap-changer family from our product range and stop series production as of March 31, 2022.

Existing projects and contracts, for which we have already given written commitments and confirmed a delivery beyond the above-mentioned date, will of course remain valid. However, we kindly ask you already today to use the VACUTAP® VR® for all your planned projects. Of course, we will continue to support you with our competent after sales service (spare parts, repairs, support).

Please also forward this information to other relevant departments within your company. We thank you for your confidence in us and our products and look forward to our further cooperation. For any questions related to this discontinuation, please feel free to contact our sales team at any time.

With kind regards

Maschinenfabrik Reinhausen GmbH
